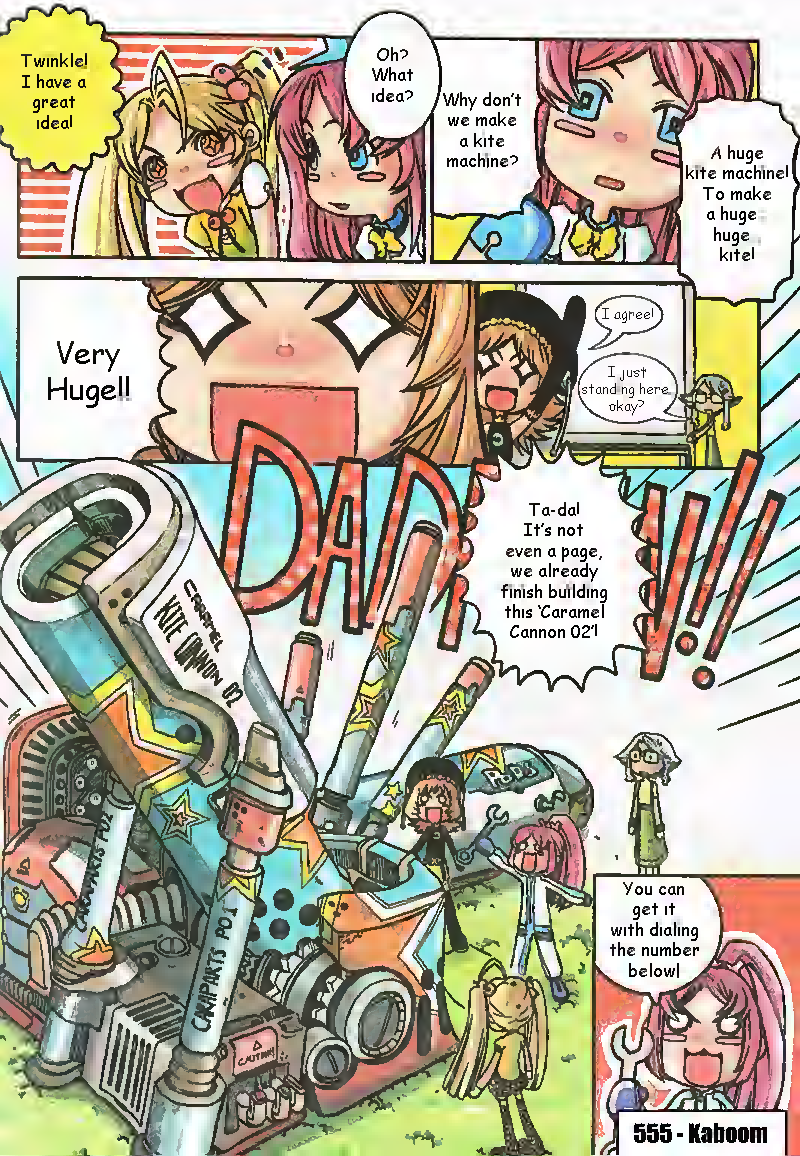
Er... May I ask you?
Why the kite didnt fly?
I ask you... Because a nerd like you usually know all this...
Do you wan't some more?!
I want to know too!
You guys wanna know to? Okay...
Basically... kite don't fly but use it aerodynamic shape to manipulate the air
Don't care what the kite shape. For example, box, wau bulan or triangle, all use the same principle
Translator note: Wau bulan is a Malaysian traditional kite
First, a ballast needed at the down side of the kite for it balance
Weight
Aerodynamic
The frame must be strong and flexible. This make the kite easier to control. The balance also can be added by making it symmetry
Same Weight
That all for the class today, students!
Clap!
Clap!
Clap!
Clap!
Clap!
Clap!



Twinkle! I have a great idea!
Oh? What idea?
Why don't we make a kite machine?
A huge kite machine! To make a huge huge kite!
